Summary

Flutter developer with 3+ years of experience building cross-platform mobile apps. I have three apps live on Google Play, with iOS deployment in progress through Codemagic and TestFlight. I built and sold my own POS product that digitized a fully manual business. I currently build subscription, payment, and wallet features at SporTech, and work remotely as a full-stack developer at Surge, building a Node.js backend and Flutter POS for a restaurant platform. My stack covers Flutter, Dart, Kotlin Multiplatform, Node.js, Go, Firebase, PostgreSQL, and payment integrations. I write clean, maintainable code and take full ownership from design to deployment.

Experience

Junior Mobile Developer **Jul 2026 – Present**
SporTech *Islamabad, Pakistan (Onsite)*

- Built membership subscription flows in a cross-platform Android/iOS app (Kotlin Multiplatform): plan selection, checkout, upgrades, cancellation, gifting, trial validity, and entitlement-based membership badges and cards
- Integrated card checkout, saved cards, and promo codes, plus a SporCoin wallet with top-up, peer-to-peer transfer, transaction history, and compliance rules
- Built a community feed with multi-image and 4K 60fps video posts, video trimming, and image cropping, and prediction flows for football, cricket, and volleyball with prize campaigns and KYC/GPS-based eligibility
- Built Flutter admin panel modules for memberships, token pricing, promo codes, and predictions using Riverpod, and localized the admin and user apps into Arabic with RTL support, plus Spanish, French, and Italian
- Developed backend APIs in Go on PostgreSQL for memberships, token pricing, promo codes, wallets, voting, and predictions, with server-side video compression, image re-encoding, and presigned-URL caching for faster feed and story loading

Full Stack Mobile Engineer **Aug 2026 – Present**
Surge *Manchester, England, United Kingdom (Remote)*

- Building the new Surge restaurant platform backend from scratch in Node.js (Express 5, TypeScript) with PostgreSQL, Redis, and Docker: auth and RBAC, menu and pricing, orders, tables, delivery, reports, and administration modules
- Integrated Stripe card payments, refunds, and Stripe Billing subscriptions with webhooks, plus a BullMQ outbox worker and a Socket.IO realtime gateway for live order updates
- Rebuilt the Flutter POS on the new API with offline selling, order editing, dine-in tables, delivery tracking, and USB/Bluetooth receipt printing, tested across phone and tablet sizes
- Created a shared Flutter kit for the staff apps with a generated API client covering 114 endpoints, realtime updates, and brand-based light/dark theming

Flutter Developer (Part-time) **Aug 2025 – Jul 2026**
Surge *Manchester, England, United Kingdom (Remote)*

- Integrated thermal receipt printing using Android native code, improving receipt generation speed by 70% and eliminating cashier workflow bottlenecks
- Maintained the production Flutter POS used in 10+ UK restaurants, resolving crash-causing bugs and cutting screen load times by 40%

Mobile App Intern **Jun 2025 – Aug 2025**
Surge *Manchester, England, United Kingdom (Remote)*

- Built the frontend of a multilingual (English/Italian) license test-prep app with clean UI, Provider state management, and REST API integration
- Developed a rider delivery app frontend directly integrated with the company POS system for real-time order management
- Integrated REST APIs and WebSockets across multiple applications, collaborating with the backend team to ensure smooth data flow

Freelance Flutter Developer **Jul 2023 – Jul 2026**
Self-Employed *Remote*

- Independently designed, developed, and shipped 10+ Flutter applications for clients and independent products, spanning ride-hailing, marketplace, POS, parking, voting, and ML integrations
- Built, marketed, and sold Scalar POS as an independent product, now used by 3 businesses to replace manual operations
- Published 3 apps on Google Play (Bonanza Conexión, Reevall, and Bluepin) with real users

Education

Bachelor of Science in Software Engineering **Aug 2022 – Jun 2026**
FAST NUCES Islamabad Campus *Islamabad, Pakistan*

F.Sc Pre Engineering **Sep 2019 – Jul 2021**
Government Boys PGC Pallandri Sudhnuti AJK *Sudhnuti, AJK*

Projects

Bonanza Conexión | *Flutter, Firebase, Mercado Pago, Cloud Functions* | Google Play
- Built and deployed a production ride coordination platform end-to-end, now live on Google Play
- Implemented role-based flows for passengers, drivers, and coordinators with manual and automatic ride assignment
- Integrated Mercado Pago payment gateway via Firebase Cloud Functions for secure in-app wallet recharge and transaction processing
- Developed a pixel-perfect bilingual (Spanish/English) responsive interface with location-based pickup and real-time monitoring

Reevall | *Flutter, Firebase, Firestore, Storage, Cloud Functions* | Google Play
- Built Pakistan's first zero-waste campus marketplace enabling university students to buy and sell within their campus, live on Google Play
- Refactored the entire app architecture for scalability and implemented a pixel-perfect responsive UI delivering a significantly smoother experience
- Implemented secure in-app chat, listing management, push notifications via Cloud Functions, and a student discount portal

Bluepin | *Flutter, Firebase, Firestore, Storage, Stripe, Google Maps API, Cloud Functions* | Google Play | *App Store (TestFlight)*
- Built a parking reservation system with integrated admin and user panels for comprehensive parking space management
- Implemented Stripe payment integration via Cloud Functions and Google Maps API for real-time location-based parking search
- Live on Google Play; set up a Codemagic CI/CD pipeline to build and sign iOS from Windows and deploy to App Store Connect, with the build currently in TestFlight testing

Scalar POS | *Flutter, Firebase, Firestore*
- Built, marketed, and sold an independent POS product deployed across 3 businesses, enabling real-time sales tracking and inventory management
- Developed sales, inventory management, and inventory valuation modules with real-time Firestore sync for accurate stock tracking
- Implemented financial reporting covering liabilities, profit and loss, and month-on-month business performance analytics
- Integrated thermal receipt printing and JSON-based data communication with a pixel-perfect cashier interface that significantly reduced order processing time

E-Voting System | *Flutter, Firebase, Firestore, Biometric Authentication*
- Built a secure digital voting app with biometric authentication (fingerprint and facial recognition) and encrypted voter data
- Implemented a real-time turnout analytics dashboard and election management tools for administrators

AI Lead Generation Agent | *Python, FastAPI, OpenAI API, Next.js*
- Built an AI sales agent that imports and normalizes leads, crawls and analyzes business websites, and recommends relevant services
- Used the OpenAI API to generate outreach emails for human review, with Gmail integration and scheduled follow-up tracking

Ride App | *Flutter, Firebase, Firestore, Mapbox API*
- Developed a ride-hailing application with Firebase and Firestore for real-time data management
- Integrated Mapbox API for real-time navigation and route optimization
- Implemented a dual user system with customer booking, ride history, driver reviews, in-app communication, and category-based driver verification

ClassTrack | *Flutter, MySQL, Spring Boot*
- Developed a full-stack classroom management system with separate teacher and student panels using Flutter and Spring Boot
- Implemented material sharing, announcements, attendance, and course enrollment with role-based access control and MySQL integration

CV Maker – ATS Compliant | *Flutter, Hive, Provider, AI Integration*
- Built a free, privacy-focused resume builder optimized for ATS, with AI-powered scoring and personalized improvement feedback
- Designed a fully offline app with on-device Hive storage and PDF generation with customizable fonts

Motion Tracking Analyzer | *Flutter, Provider, Hive, REST APIs*
- Developed a Flutter frontend integrated with a Python backend via REST APIs for Google ML model motion analysis, with categorized movement recording and Hive local storage

Technical Skills

Mobile: Flutter, Dart, Kotlin Multiplatform, Compose Multiplatform, Android, iOS, Provider, Riverpod, BLoC, MVVM, Secure Storage, Widget Testing, UI/UX Design
Backend: Firebase (Auth, Firestore, Storage, Cloud Functions, FCM), Supabase, Node.js (Express), Go, Python (FastAPI), Spring Boot, REST, WebSockets
Databases: PostgreSQL, Redis, Firestore, MySQL, SQLite, Hive
Integrations: OpenAI API, Stripe, Stripe Billing, Socket.IO, Mercado Pago, Google Maps, Mapbox, ML Models, Thermal Printing
Release: Codemagic, Google Play Console, App Store Connect, TestFlight
Languages: Dart, Kotlin, TypeScript, Go, Python, Java, C++ **Tools**: Git, GitHub, Android Studio, VS Code, Docker
Methodology: Agile Development
