Summary

Flutter developer with 1+ year of professional experience and 3 years of total Flutter development, building cross-platform mobile applications that ship and get used. I have two live apps on Google Play, built and marketed my own POS product that digitized a fully manual business, and work part-time with an international team remotely. My stack covers Flutter, Dart, Firebase, REST APIs, and payment and mapping integrations. I write clean, maintainable code and take full ownership from design to deployment.

Experience

Flutter Developer

Aug 2025 – Present

Surge

Manchester, England, United Kingdom (Remote)

- Integrated thermal receipt printing using Android native code, improving receipt generation speed by 70% and eliminating cashier workflow bottlenecks
- Optimized multiple screens and resolved critical crash-causing bugs, reducing screen load times by up to 40% and significantly improving app stability
- Collaborate with backend team to integrate new APIs, implement new features, and maintain code quality across the POS platform

Mobile App Intern

Jun 2025 – Aug 2025

Surge

Manchester, England, United Kingdom (Remote)

- Built frontend of multilingual (English/Italian) license test prep app with clean UI, Provider state management, and REST API integration
- Developed rider delivery app frontend directly integrated with the company POS system for real-time order management
- Integrated REST APIs and WebSockets across multiple applications, collaborating with backend team to ensure smooth data flow

Education

Bachelor of Science in Software Engineering

Aug 2022 – Jun 2026

FAST NUCES Islamabad Campus

Islamabad, Pakistan

F.Sc Pre Engineering

Sep 2019 – Jul 2021

Government Boys PGC Pallandri Sudhnuti AJK

Sudhnuti, AJK

Projects

Scalar POS | Flutter, Firebase, Firestore

- Built, marketed, and sold an independent POS product that fully digitized a manual business, enabling real-time sales tracking and inventory management for the first time
- Developed comprehensive sales, inventory management, and inventory valuation modules with real-time Firestore sync for accurate stock tracking
- Implemented financial reporting covering liabilities, profit and loss, and month-on-month business performance analytics
- Integrated thermal receipt printing and JSON-based data communication with a pixel-perfect cashier interface that significantly reduced order processing time

Bonanza Conexión | Flutter, Firebase, Mercado Pago, Cloud Functions | [Google Play](#)

- Built and deployed a production ride coordination platform end-to-end, now live on Google Play
- Implemented role-based flows for passengers, drivers, and coordinators with manual and automatic ride assignment
- Integrated Mercado Pago payment gateway via Firebase Cloud Functions for secure in-app wallet recharge and transaction processing
- Developed pixel-perfect bilingual (Spanish/English) responsive interface with location-based pickup and real-time monitoring

Reevall | Flutter, Firebase, Firestore, Storage, Cloud Functions | [Google Play](#)

- Built Pakistan's first zero-waste campus marketplace enabling university students to buy and sell within their campus, live on Google Play
- Refactored entire app architecture for scalability and implemented pixel-perfect responsive UI delivering a significantly smoother experience
- Implemented secure in-app chat, listing management, push notifications via Cloud Functions, and student discount portal

Bluepin | Flutter, Firebase, Firestore, Storage, Stripe, Google Maps API, Cloud Functions

In Progress

- Developing parking reservation system with integrated admin and user panels for comprehensive parking space management
- Implementing Stripe payment integration via Cloud Functions and Google Maps API for real-time location-based parking search
- Building responsive pixel-perfect UI with REST API and JSON integration for seamless cross-platform experience

Ride App | *Flutter, Firebase, Firestore, Mapbox API*

- Developed comprehensive ride-hailing application with Firebase and Firestore for real-time data management
- Integrated Mapbox API for real-time navigation and route optimization with seamless user experience
- Implemented dual user system with customer booking, ride history, driver reviews, and in-app communication
- Created driver registration with category-based verification and direct customer-driver call functionality

ClassTrack | *Flutter, MySQL, Spring Boot*

- Developed full-stack classroom management system with separate teacher and student panels using Flutter and Spring Boot
- Implemented teacher functionality for material sharing, announcements, and attendance with role-based access control
- Created student portal for material access, attendance tracking, and course enrollment with MySQL database integration

CV Maker – ATS Compliant | *Flutter, Hive, Provider, AI Integration*

- Built free, privacy-focused resume builder optimized for ATS with AI-powered scoring and personalized improvement feedback
- Designed fully offline application with on-device Hive storage ensuring complete privacy with no cloud dependency
- Integrated PDF generation with customizable fonts and intuitive file handling for seamless user experience

Motion Tracking Analyzer | *Flutter, Provider, Hive, REST APIs*

- Developed Flutter frontend integrated with Python backend via REST APIs for Google ML model motion analysis
- Implemented categorized movement recording, Hive local storage, and Provider state management for efficient data handling

Plant Care Companion | *Flutter, Provider, REST APIs*

- Developed Flutter frontend integrated with ML model for plant health monitoring and disease identification via camera
- Implemented customizable watering reminder system and camera integration for ML-based plant health detection

Technical Skills

Mobile: Flutter, Dart, iOS Development, Android Development, Cross-Platform Development, Provider, MVVM, UI/UX Design

Backend: Firebase, Firestore, Supabase, MySQL, SQLite, Spring Boot, Cloud Functions, REST APIs, WebSockets

Integrations: Mapbox, Google Maps, Stripe, Mercado Pago, ML Models, Thermal Printing

Languages: Dart, Java, C++ **Tools:** Android Studio, VS Code, Git, GitHub, Docker

Methodology: Agile Development
